

Interactive - 04 - update the table

Note that we have an error in our data. Bob true should be Bob True. Let's change some data.

```
update <table-name>
  set <list of columns to modify>
  where <boolean expression>
;
```

so... let's look at the data before the update

```
SELECT * from name_list;
```

Update it to fix it

```
UPDATE name_list
  SET real_name = 'Bob True'
  WHERE real_name = 'bob true'
;
```

Now let's look at the data:

```
SELECT * from name_list;
```

Much better! The query should return 6 rows. The application checks that you are getting back 6 rows of data for grading.

Book: page 139 talks about update.
