

Interactive - 05 - insert more data / select unique data

Let's put in some more data - that has some mistakes in it.

```
INSERT INTO name_list values
  ( 'Liz Trubune',      30, 'WY' ),
  ( 'Jane True',        20, 'WY' ),
  ( 'Lary Smith',       58, 'NJ' ),
  ( 'Dave Dave',        21, 'NJ' ),
  ( 'Laura Ann Alkinoos', 34, 'PA' )
;
```

The problem is that “Jane True” is now a duplicate!

Let's see it.

```
SELECT * from name_list;
```

We will get how to prevent this later. Right now let's get unique data back when the actual data has duplicates. For lots of reasons you can get duplicates in a set of selected data.

```
SELECT distinct * from name_list;
```

The select should return 10 rows of data.

Book: pages 12 to 14.
