

Interactive - 13 - drop both tables

Let's try getting rid of our 2 tables. Our first attempt to do this will fail.

```
drop table if exists us_state;
```

We have a dependency via foreign constraint on us_state. That is name_list.

We can do this in order - or we can use an option to “cascade” the drops. “cascade” is powerful but dangerous. In PostgreSQL it will drop the table and associated constraints. In Oracle it cascades to the tables referenced!

```
DROP table if exists name_list;  
DROP table if exists us_state;
```

Now use the supplied script to re-create the tables. There will be some additional columns when you do this that we will use in future homework exercises.

The files are hw13_4.sql, hw13_5.sql, hw13_6.sql, hw13_7.sql - run the entire set. The files are shown below. After you have run the file do the select to see a table of the states.

```
DROP TABLE if exists name_list cascade ;  
DROP TABLE if exists us_state cascade ;
```

```
CREATE TABLE us_state (  
    state_id      UUID NOT NULL DEFAULT uuid_generate_v4() primary key,  
    state_name    text NOT NULL,  
    state         char varying (2) NOT NULL,  
    FIPS_code     char varying (2) NOT NULL,  
    area_rank     int not null default 9999,  
    area_sq_mi    numeric not null default 0,  
    population    int not null default 0,  
    fed_area      int  not null default 0,  
    gdp_growth    float null default 0.0,  
    gdp           float null default 0.0  
);
```

```
CREATE UNIQUE INDEX us_state_uidx1 on us_state ( state );
```

```
INSERT INTO us_state  
    ( state_name,      state,  FIPS_code,  population, area_rank, area_sq_mi, fed_ar
