Interactive - 41 - case/when - if in projected columns

You can change the return values in the projected columns.

For example if you want to map certain values to new values in a query. An example with the name_list table is to create a new column that is an in-Wyoming column.

```
SELECT
         t1.real_name
       , t1.state
       , case
           when t1.state = 'WY' then 'y'
           when t1.state is null then 'n'
           else 'n'
         end as "in_wyoming"
    FROM name_list as t1
;
```
